DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 1-3, drawn to a method of processing observed data, classified in class 702, subclass 75.
 - II. Claims 4-6, 10, and 11, drawn to a pulse photometer including a processor operable to process the first data set and the second data set with a rotating matrix and determines a frequency of the pulse wave and pulse rate of the living body (claim 10), classified in class 600, subclass 500.
 - III. Claims 8 and 9, drawn to a pulse photometer including a processor operable to obtain a concentration of at least one light-absorbing material in blood, i.e. oxygen saturation, hemoglobin, or an injected dye (claim 9), classified in class 600, subclass 322.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group II and Group III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention Group III has separate utility such as determining the concentration of a blood consitutent. Group III's utility is with detection of pulse wave or pulse rate. See MPEP § 806.05(d).

Inventions Group I and Group II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process: (MPEP § 806.05(e)). In this case, the method Group I does not require a pulse photometer and its general scope encompasses general processing devices with frequency analysis.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II and III, restriction for examination purposes as indicated is proper.

A telephone call was made to Darryl Mexic on 07 June 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Application/Control Number: 10/695,907 Page 4

Art Unit: 3735

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Navin Natnithithadha whose telephone number is (571) 272-4732. The examiner can normally be reached on Monday-Friday, 8:00-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles Marmor, II can be reached on (571) 272-4730. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
